Summary

IT leader with 14+ years across IT operations, identity, endpoint, security, and infrastructure, including 8+ years leading IT teams and owning IT operations at fast-scaling companies. At MaintainX, grew the IT team from 2 to 6, rolled out Okta SSO/SCIM across 180+ SaaS applications, migrated ~600 endpoints to CrowdStrike in 4 weeks, and moved the device fleet to ~95% Apple. Now leading IT through the Autodesk acquisition: a 950+ employee laptop transition and identity integration planning. Hands-on technically; builds the structure, automation, and governance that let IT scale with the company.

Experience

AUTODESK

Aug 2026 – Present

Principal Enterprise Systems & Applications Analyst

- **Laptop transition:** Leading the swap of 950+ employee laptops to Autodesk-issued devices: ~900 swapped to date; ~60% of replaced devices returned for wipe and cleaning.
- **Software consolidation & identity:** Own project planning and strategy for consolidating software across both companies, including identity integration planning.
- **Acquisition integration:** Lead the IT department and the IT operations transition through the acquisition while still running IT operations for MaintainX; coordinated HR, IT, and Finance to align processes to Autodesk standards and established the hardware provisioning, access provisioning, and termination processes.

MAINTAINX

Mar 2024 – Aug 2026

Information Technology Team Lead

- **Identity:** Architected the company-wide Okta rollout across 180+ SaaS applications (SSO, SCIM, RBAC-driven dynamic groups by department/role/location, Hibob as source of truth) in ~1 year with no operational disruption.
- **Endpoint security:** Led the SentinelOne → CrowdStrike migration across ~600 endpoints (450 Mac / 130 Windows / 20 Linux) in 13 waves over 4 weeks with a 3-person team; wrote a Python script to cleanly remove the legacy agent.
- **Device strategy:** Authored the benchmarked business case to standardize on Apple (battery and performance-per-watt data; Parallels for Finance's Excel dependency), taking the fleet to ~95% Apple (~40 Windows devices across ~900 employees).
- **MDM & automation:** Consolidated MDM on NinjaOne (~130 Windows/Linux devices, first-ever Linux coverage) alongside Kandji/Iru for Apple; built an AutoPkg → Kandji Self Service pipeline and MDM-deployed Python/Bash scripts for standard-vs-admin configurations.
- **AI governance:** Led the ChatGPT Enterprise and Claude rollouts and, with Security, built the governance layer: Okta-based access, RBAC scoped per module, and a vetting process for MCP servers and connectors.
- **Team & operations:** Owned IT operations; grew IT from 2 to 6 technicians across Montreal and Raleigh; defined roles, levels, and career paths with HR as headcount scaled toward 1,000.
- **Cost & vendors:** Saved ~$50K through an Atlassian license audit (similar cleanup on Figma); ran proofs of concept for Serval (ITSM) and a Fortinet network stack.
- **Global logistics:** Ran device procurement and lifecycle through Growrk (warehousing, reverse logistics) for employees in Canada, the US, and 6 other countries; kept hardware flowing through an industry-wide component shortage. Built IT asset tracking and a help desk on MaintainX's own product, avoiding a separate ITSM license.

Results

14+ YEARS IN IT	**180+** SAAS APPS ON OKTA SSO/SCIM
~600 ENDPOINTS TO CROWDSTRIKE IN 4 WEEKS	**2 → 6** IT TEAM GROWTH
~95% APPLE-STANDARD FLEET	**950+** EMPLOYEE LAPTOP TRANSITION

Experience (cont.)

LEAP EVENT TECHNOLOGY
2018 – 2024

IT Team Lead / Systems Administrator

- **Apple MDM:** Established the company's first MDM on JAMF Pro with zero-touch enrollment via Apple Business Manager for ~400 Macs (employee and field/kiosk), cutting new-hire setup from 30–60 minutes to 10–15.
- **Directory consolidation:** Consolidated 8 Microsoft 365 / Google Workspace environments (~500 employee and ~40 service accounts) into one Google Workspace tenant over 3–4 months, retaining legacy accounts (disabled) for audit.
- **IT operations & help desk:** Owned IT operations; replaced ad hoc Slack support with Jira Service Management and SLA-based workflows: 98% SLA average across 350 employees with a 3-person core team.
- **Security & network:** Administered Sophos endpoint security with custom detection rules; administered Cisco Meraki firewall, switching, and wireless; wrote IT policies aligned to ITIL.
- **Projects & people:** Lead IT representative for a company-wide rebrand (domains, email, branded assets); on-site support for the UFC International Fight Week fan expo; built and mentored a team of junior technicians.

Earlier Career

YELLOW PAGES
2017 – 2018

IT Desktop Technician

Administered Active Directory and Microsoft Exchange; provided hardware/software support; maintained and audited hardware inventory.

CGI
2016 – 2017

Senior IT Help Desk Technician

Supervised L1/L2 service desk agents, authored team-wide troubleshooting documentation, and trained new hires; supported a client-facing Microsoft Intune implementation.

APPLE
2014 – 2016

Genius

Led one-on-one onboarding for new Mac customers; repaired Mac and iOS devices and coordinated the Genius Bar queue to meet SLA.

MICROBYTES
2012 – 2014

Computer Repair Technician

Hardware and software servicing for customer devices; managed service department inventory. First step in my IT career.

Certifications

Okta Certified Administrator
Since 2022

Kandji / Iru Certified Administrator
Since 2024

JAMF Certified Administrator
Since 2020

Google Workspace Certified Administrator
Since 2019

Microsoft Certified Administrator
Since 2017

Apple Certified Technician
Since 2015

Projects | Home Lab

- **Virtualization & storage:** Three Proxmox nodes (one with RTX 3080 passthrough for GPU-accelerated VMs); TrueNAS SCALE (RAIDZ2, encrypted, 6-hourly snapshots) plus a second NAS; Home Assistant on Debian containers.
- **Home network (pfSense):** Firewall virtualized on a dedicated Proxmox node (iKOOLCORE R2 Max), PPPoE/VLAN WAN, 10GbE/2.5GbE software-defined switch, AdGuard Home DNS filtering, WireGuard and OpenVPN.
- **AI agent (Hermes):** Local-first setup: on-device models for routine work, frontier models for hard tasks, role-based bots (homelab ops, notes librarian, architect), persistent skills, and a semantic-search notes vault.
- **Apps I built:** HomeDash, a SwiftUI iPad smart-home dashboard (HomeKit lights, weather, news); a custom Android TV launcher; a personal fork of an open-source browser.
- **Media & gaming:** Plex server, projector home theater, and a Windows 11 gaming VM with Apollo/Moonlight streaming.
